Resident Manual**

ADVERSE DRUG REACTION REPORTING

An adverse drug reaction (ADR) is defined as any undesirable or unexpected event to a drug (used at normal human doses for prophylaxis, diagnosis, or therapy) that requires discontinuing a drug, modifying a dose, prolonging hospitalization or providing supportive treatment. All suspected ADRs should be documented in the medical record and reported to pharmacy by contacting a pharmacist, calling the ADR Hotline at 244-4185 or by completing an incident report utilizing the online occurrence system found on the Infonet under IDinc. Access the system by entering first and last name, and MD number.
