The ACGME requires that as an institution, we ensure that residents participate fully in the educational and scholarly activities of their program. In addition, the Program Requirements for our residencies and fellowships further define the required elements of scholarly activity and research. A core curriculum that meets ACGME Institutional and Program Requirements was identified and a professionally-produced lecture series developed:

- Scientific Research – Getting Started
- Protocol Development and Research Design
- Scientific Writing & Presentation Skills
- Evaluating Basic Literature
- Basic Biostatistics
- Information Literacy

The lecture series is available for review through New Innovations.
